01 Why build this?

Core Power is a streamlined, one-stop platform for Sitecore learning and development, built to support developers at every stage of their journey. We created Core Power to simplify how developers learn the Sitecore ecosystem, since the official documentation—while comprehensive—can often feel overwhelming, especially for newcomers. Its largely flat structure makes it difficult to understand how concepts relate to one another, which topics are foundational, and which areas are most important for certifications or real-world development. Core Power addresses this by organizing knowledge into clear, logical learning paths that group related concepts together and highlight their importance within the broader platform. To further personalize the experience, the platform uses AI agents to intelligently suggest learning paths based on a developer's goals and experience level, along with a chatbot that helps answer questions, explain concepts, and guide users through the learning journey

Our Vision

Core Power provides a frictionless learning experience for Sitecore developers at every level. Whether you're studying for certification or need help with a specific feature, Core Power delivers the guidance you need.

Our Mission

- Deliver learning aid grounded in community sentiment and core competencies across all Sitecore products.
- Ensure learning is personalized, frictionless, and keeps developers doing what they love..building!

02 Technical Highlights

Bubble Visualization

The D3 visualizer transforms complex knowledge resource data into an intuitive bubble chart for easy comparison and exploring key topics at a glance. Each bubble's size and color reflect the relative weight and grouping of a competency, allowing users to quickly identify areas of focus and drill down for more detail.

Insights grounded in community sentiment and core competencies

Uses FastAPI microservice deployed to Render cloud that serves a serialized JSON data set of weighted knowledge resources by topics based on the following criteria:

- percentage in the competency list from the product's certification study guide
- intelligent scoring based on community sentiment
- quantity of documentation available on the Sitecore documentation site

Study help with dynamic quizes

Users can reinforce learning with dynamic quizzes generated from real competency data. The system adapts questions to the selected product, making study sessions targeted and effective. Instant feedback and varied question types help users identify knowledge gaps and build confidence before certification or real-world application.

Agentic chat experience grounded in Sitecore docs

Agentic chat delivers instant, context-aware answers grounded in Sitecore docs. Users get quick, reliable guidance on competencies and best practices through a conversational interface.

Learning on the full suite of Sitecore platofrms at your finger tips (ability to select different products)

Instantly access learning resources and competency data for the full suite of Sitecore platforms—all in one place. Easily switch between products to compare, study, and explore unique competencies for each, streamlining cross-platform learning and upskilling.

Starting point for deeper exploration into official docs and community guides

Use the platform as a launchpad for deeper exploration, with direct links to official documentation and curated community resources. Quickly move from high-level competency overviews to in-depth learning, all from a single interface. Each topic summary provides actionable next steps, making it easy to continue your learning journey with trusted, up-to-date materials.
